

Stack & Scale — End-to-End Team QA & Production Verification Suite

Master Verification Matrix: [Platform Blueprint v1.0](#) & [100 Architecture Question Decisions](#)

Target Environment: OVHcloud Production Host (`vps-5d4dfcb1` , Ubuntu 24.04 LTS)

Production Gateway: <https://stackandscale.org>

Identity Gateway: <https://identity.stackandscale.org>

Payload CMS Gateway: <https://cms.stackandscale.org/admin>

API Gateway: <https://api.stackandscale.org>

Public Status Gateway: <https://status.stackandscale.org>

1. Collaborative Team Verification Architecture

Stack & Scale is tested through a **4-stage collaborative verification chain**. Each engineer owns an explicit operational boundary, executing click-by-click tests and passing cryptographic / transactional state to the next engineer in the pipeline.

2. Team Member QA Runbooks

Member	Assigned Engineer	Scope & Architectural Focus	Runbook Document
Member 1	Muhammad Saad Khan	Public Web, Design System, Command Palette, Payload CMS Editorial Lifecycle, <code>/blog</code> 308 Redirects & Inbound Lead Funnel	1 - MUHAMMAD - SAAD - KHAN - MARKETING - CMS - CONVERSION.md
Member 2	Talha Shams	Keycloak OIDC Gateway, RBAC Protection, Staff Lead 360 Inbox, Opportunity Pipeline Conversion (\$45,000 USD), Operations Outbox Telemetry & Knowledge Base	2 - TALHA - SHAMS - IDENTITY - STAFF - CRM - OPERATIONS.md
Member 3	Hanzala Khan	Commercial Proposals, Multi-Tenant Client Portal (<code>/portal/[id]</code>), Product Customer Account Portal (<code>/account/[id]</code>), Digital E-Signatures, Invoicing, MinIO S3 File Vault & ClamAV Antivirus Quarantine Drill	3 - HANZALA - KHAN - CLIENT - PORTAL - PRODUCT - ACCOUNTS - STORAGE.md
Member 4	Dragoooo	Network Perimeter Hardening, Port Scans, API Probes & Rate Limiting, Grafana Telemetry, Loki LogQL Queries, Container Chaos Self-Healing Drill & Disaster Recovery Backups	4 - DRAG0000 - INFRA - SECURITY - OBSERVABILITY - DR.md

3. Operational Rules of Engagement

- Sequential Execution:** Runbooks are executed in sequence from Member 1 → Member 2 → Member 3 → Member 4.
- Real Production Evidence:** Do not skip tests. Every operator must record their real timestamps, correlation IDs, and sign their respective verification sheets.
- No Zero-Byte Mocking:** Files uploaded and SQL dumps created must contain genuine bytes and pass structural validation.
- Final Gate Assembly:** Once all 4 sign-off tables are marked `Pass`, Dragoooo signs the Master Launch Summary to confirm complete platform readiness.
